

New Technology Engine Antifreeze/Coolant

After researching two of Yanmar's largest distributors and several antifreeze manufacturers, we have decided to switch to Dex-Cool antifreeze. Dex-Cool is an organic, acid based silicate/phosphate free, Ethylene Glycol antifreeze which we will use for the closed cooling system on all engines we winterize this year. Yanmar does not require this type but *strongly* recommends its use in all Yanmar engines old and new. Some of the advantages are improved water pump wear, excellent protection against pitting corrosion, better heat transfer, outstanding hot surface aluminum protection and effective long term corrosion protection for your engine and cooling system. This antifreeze is orange in color not the green or yellow that you are used to seeing. After mixing with water it gives a muddy water appearance which is normal. Switching to Dex-Cool will require that we flush your cooling system as it is not compatible with your current coolant. **DO NOT MIX DIFFERENT TYPES OF ANTIFREEZE.** We stock Dex-Cool or you can purchase it at any automotive supply store. *Spent engine coolant should never be poured down a drain, in the lake or on the ground. We accept used antifreeze for proper disposal @ \$3.70 per gal and used oil @ .34 per qt.*

Please call or email me with questions or to schedule to have your antifreeze changed.
